DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4-20, 24-52 are rejected under 35 U.S.C. 102(e) as being anticipated by Pacetti et al. (US 2004/0063805 A1).

Pacetti et al. disclose a stent including a multi-layer coating as claimed comprising: a primer layer, a drug polymer layer and a topcoat layer, an intermediate membrane and a finishing coat layer wherein the primer coating including an adhesion/anchor polymer as claimed (see paragraph 13 to 54).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3, 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pacetti et al. (US 2004/0063805) Pacetti et al. disclose all the limitations of the claims except for the presence of image enhancing material and the thickness of the layers as

claimed. The image enhancing material and the thickness range as claimed are well known in the art. Therefore, it would have been obvious to one having ordinary skill in the art to employ the image enhancing material as claimed into Pactti et al.'s stent in order to navigate the stent to a desired site and to apply a coating with the thickness range as claimed in order to deliver drug to a treated site with a desired amount drug as well as with a desired time control degradation.
